

# SPECTRA TUNE LAB

## SPECTRAL LIGHT ENGINE

- 10 different colored LED channels with independent dimming
- Optical feedback that warrants spectral precision and accuracy.
- Fast spectral sequences in asynchronous operation mode
- Compact and light weight system
- Mount holes distances compatible with standard optical tables & tripods
- Easy-to-use software interface ( $\mu$ WAVE) that calculates all the relevant quantities: color coordinates, CRI/Ra, TM30-15-Rf/Rg and graphical representations
- Organize your knowledge! Store all the light spectra and spectral sequences in the user's database and share your spectra with your scientific colleagues.
- Optional: RESTful API
- Optional: C-mount compatible adaptor
- Includes 1 LIGHT HUB

Spectrally tunable LED light engine that make it possible to reproduce any lighting spectrum in the visible range
